EXPERIENCE

Car Planet UK

Sep 2026 - Present

Product Owner

- Own the backlog, roadmap and release testing for six live products in automotive retail, used daily by staff and customers.
- Hired for a launch-phase mandate to make the products commercially ready, covering launch, marketing and commercialisation as well as redesigns of core modules such as timesheets.
- The portfolio spans two consumer websites for vehicle retail and vehicle buying (the latter being the CarDaddys car-buying site) with integrated CRM, online valuations and multi-channel customer messaging; an end-to-end dealer operations platform covering the vehicle lifecycle from acquisition, inspection and preparation through advertising, sales, finance and workforce management; a logistics platform and driver app for vehicle movements, live tracking and driver payments; and two AI products for sales-call analysis and coaching and for conversational customer assistance (Athena).
- Prioritise requests raised directly by sales, operations, finance and HR into one roadmap for a single shared development team, and work with developers, designers and operational teams from discovery to launch, testing releases directly with users.
- Authored 217 Jira tickets across five projects (AG, RPCD, CPW, UIUX and CPIS) between 3 Sep and 27 Oct 2026 (63 stories, 92 sub-tasks, 42 tasks and 17 bugs), with 65 shipped and 30 in testing.
- Write every story with a user story, Given/When/Then acceptance criteria, out-of-scope notes and cross-functional dependencies, split large pieces into sub-tasks the team can estimate, query the product databases to verify current behaviour before describing it in a ticket, and proposed merging the operations platform's separate Feature and Bug boards into one.
- Leading the replacement of three third-party timesheet, clocking and holiday tools with in-house Timesheet, Rota and Holidays modules across around 20 sub-tasks, choosing to build in-house rather than renew the clocking subscription, keeping the existing clocking machines and redirecting their data so lateness and overtime feed straight into the platform.
- Defined the workforce business rules with HR, including lateness measured in minutes, attendance and sickness visible only to each manager's own team, an audit log on every timesheet edit with existing comments preserved, contracted working patterns as default rota hours, day codes by staff type, and manual entries kept distinct from clocking data.
- Specified the module feature set, including a timesheet grid with multi-cell copy and paste, a day editor with grouped codes and change history, attendance statistics with CSV export and date-range filtering, rota shift blocks with holiday-conflict warnings and a change log, and a holiday approvals queue with a who's-off view and leave balances.
- Produced a 10-artboard redesign canvas for Product Manager review before any build, re-sequenced delivery design-first following that review, and captured a target design language of tokens, components and accessibility rules so later modules stay consistent.
- Redesigned collection route planning (the Movement Planner) on the logistics platform after sitting with transport managers to capture how they actually run collections, specified across 12 sub-tasks covering selectable home-base start points with the depot as default, key-storage rules by distance from London versus Manchester with a key-confirmation prompt, every collection run ending at the central site, crew routing by pool-car drop-off or car relay, manual stop reordering, 30-minute departure slots, highlighting and blocking of cars already scheduled on another run, and removal of the unused Internals tab.
- Set differentiated requirements for three driver types, with fewer evidence steps for salaried site drivers and operatives than for self-employed drivers and passenger costs set by type, added a change log to every manual edit of a planned run, and shipped companion changes letting managers edit job locations and passengers from the approval screen.
- Specified financial controls for driver payments, locking each pay week once its invoice is sent, rolling late-approved jobs into the next open week as auditable per-job entries carrying the source week and job ID, adding bulk pay-week reconciliation and bulk mark-as-paid, and restricting customer and financial details to managers.
- Specified a backfill of paid and unpaid statuses from the Accounts master list and a fix for a penny-level mismatch between dashboard totals and the Excel export, and shipped Payments page changes surfacing outstanding balances from previous weeks and allowing "Pay Denied" to be reverted to "Payment Pending".
- Tightened vehicle inspection sign-off across around 13 tickets, so advisories require a mandatory acknowledgement instead of failing an inspection, QC inspectors re-verify tyre and brake values pre-filled from the mechanical inspection, and sign-off appears only once every item applicable to the vehicle's fuel type is complete, with sign-off holders able to undo it.
- Specified an Inspection Accountability dashboard giving managers per-technician, per-buyer and prep-variance views, counting mechanical-inspection misses separately from comebacks, adding a key on every tab to explain each figure, and renaming tabs to match how managers describe them.
- Shipped QC dashboards on web and mobile showing unique cars checked per inspector, and caught a reconciliation bug between the detail-panel counts and the ranking table before rollout.

- Ran a rolling, cross-branch staff stress-test of the Athena conversational AI assistant before launch, reviewing flagged replies with developers in its admin console and converting them into prioritised bug fixes (ignored feature filters, lost conversation context, brand-origin misunderstandings) and new stories (budget-aware ranking, timing of personal-details requests, and hand-off to Aftersales when a query is unresolved).
- Turned an Aftersales Manager's request for the assistant to learn from call transcripts into an 11-ticket call-deflection pilot, with legal and data-protection review before any transcript use, in-scope intents ranked by volume from transcripts, answers written and approved by the Aftersales team, and deflection measured against a call-volume baseline and response-time target.
- Initiated a 17-ticket data audit of the logistics platform covering release tracking by version, platform and date, failed-request logging, version stamping, a 13-month daily KPI summary readable without loading production, GPS history retention, stale-job expiry and a data dictionary, enabling KPI comparison across releases.
- The audit also stamps the app version on every logged request, logs 4xx, 5xx and timeout errors and flags test accounts, and surfaced a credential-storage security fix (prioritised to the top of the backlog), 2,192 open jobs older than 90 days, a sync flag that was never being set with missing-ID syncs logged as failures, evidence media no longer being captured, slow live-tracking endpoints dragging down portal-wide performance, and driver GPS history kept for only 24 hours; 7 sub-tasks were in progress and 9 queued at 27 Oct 2026.
- Reworked WhatsApp, SMS and email customer journeys for the CarDaddys car-buying website, including out-of-hours replies, live phone validation on lead forms, and lifecycle email journeys for uncontactable, purchased, declined and lapsed leads moved from the CRM into Mailchimp.
- Shipped CRM and lead-management improvements, including editable booking type, location and time, fresh valuations for seven-day-old leads, VIN and first-registration date on the lead summary, admin-only validation edits, a call-statistics export with a "Leads Not Attempted" KPI, booking-slot fixes and an A/B test of a booking progress tracker.
- Produced a 15-minute product-overview deck for the logistics platform, built on the product palette with real screenshots, plus a separate presenter script, used in Business Developer interviews and for general audiences as part of the plan to sell the platforms externally; the same format is planned for the call-analysis product.

Mayerfeld Consulting

Aug 2026 - Sep 2026

Project Manager (Consulting Practicum)

- Architected and deployed an AI-driven project management automation using Make.com, connecting Gemini, Trello and Gmail via API to convert AI-generated meeting notes, such as those from Zoom and Google Meet note-taking tools, into task cards with due dates and labels, paired with automated status emails to the people responsible; configured and tested each API connection and deployed the workflow via Network Solutions hosting, meeting the practicum's requirement for an AI-based project management tool.
- Led a five-person project team through a full four-week project lifecycle, from kick-off to final recommendation, delivering a feasibility business case for a proposed 2027 pilot of Formula Africa World, a pan-African youth leadership initiative combining two learning formats.
- Defined project scope, governance and success criteria by authoring the project charter, goal statement, assumptions log, RACI matrix, team charter and milestone roadmap, giving the team a clear, founder-ready reference throughout the engagement.
- Identified and prioritised key stakeholders, including investors, trainers and target communities, and developed a stakeholder register, engagement strategy and communication plan that shaped how the pilot proposal was positioned to each audience.
- Translated the project vision into an actionable plan by developing a work breakdown structure and applying three-point and PERT estimation techniques, sequencing work packages, dependencies and milestones into a realistic launch timeline for the pilot cohort.
- Assessed project risks and opportunities through a structured risk and opportunity register, using qualitative and quantitative analysis to define mitigation and response strategies that strengthened the credibility of the funding case.
- Synthesised four weeks of analysis into a founder-ready feasibility business case and final recommendation covering pilot benefits, commercial cooperation, cohort volume, resourcing and funding, presented directly to programme stakeholders to support a go or no-go decision on the 2027 pilot.

CIRQL

Apr 2026 - Sep 2026

Product Management and Strategy Associate

- Conducted AI-assisted competitor and market-positioning analysis covering 10+ comparable event-discovery and campus-social platforms, including Eventbrite, Meetup and Ticketmaster UK, completing the framework and analysis stage in one to two hours against a full day for manual research; surfaced differentiation gaps that recalibrated the 2026 roadmap, deferring the user-acquisition push from April to August to prioritise application development and UI/UX optimisation.
- Directed AI-assisted drafting of landing page and link-in-bio copy through five revision passes, correcting AI-introduced errors such as inaccurate image generation and misdirected phrasing, and implemented dynamic QR codes across distribution channels to enable location-level engagement analytics, cutting production time by approximately 50 per cent against a manual approach at a lower cost than an equivalent commercial tool.
- Built working fluency in the application's Flutter, Dart and Firebase architecture through AI-assisted code interpretation, cutting scoping time by approximately a full working day compared with manual review and enabling substantive contribution to feature scoping, technical feasibility assessments and prioritisation discussions.
- Produced and hosted approximately 35 live-streamed events that drove user engagement and platform visibility, contributing to 20 per cent community growth during the application's early launch phase.

- Synthesised user feedback on interface issues, from inconsistent iconography and low-resolution branding to unintuitive go-live and event-selection flows across the CIRQL and Open CIRQL features, into a prioritised design and development programme spanning the interface, landing page and QR-code journey, informing roadmap adjustments ahead of pre-revenue investment rounds.
- Managed core product decisions by combining competitor and user-feedback analysis with informal A/B testing and UX research, using Jira and Confluence on a limited basis to translate findings into clear requirements and communicate customer needs to the development team.
- Spearheaded user-acquisition efforts through direct networking at live events, onboarding 50+ new users and representing the platform to target audiences across London.
- Sourced and onboarded 10+ event-organiser partnerships, expanding the breadth and quality of listings and strengthening the platform's supply-side ecosystem.

Varaha Infra Limited

Sep 2025 - Jun 2026

Strategy Associate

- Managed and interpreted complex commercial datasets in Excel spanning coal pricing, logistics costs and supply-chain volumes, translating raw figures into structured reporting that informed executive oversight and capital-allocation decisions.
- Built and ran a recurring AI-automated research workflow (using ChatGPT, Gemini and Claude) tracking regulatory, pricing and supply-chain developments across the Indian coal and energy sector from September 2025 to June 2026, consolidating findings into structured reports that informed senior leadership's forward planning and risk assessment.
- Assessed expansion viability into Madhya Pradesh and Gujarat and their principal industrial centres, evaluating cost structures, supply-chain economics and state renewable-energy incentives such as electricity-duty exemptions, stamp-duty reimbursements and wheeling-charge waivers, with findings retained by leadership for future consideration.
- Served as the UK-based liaison for investors and external stakeholders, coordinating and preparing bilateral meetings between UK parties and senior leadership travelling from India to sustain continuity of engagement across both markets.
- Prepared briefing materials, summary reports and investor-facing presentation decks, distilling complex commercial information into clear, decision-ready formats.

St John Ambulance

Oct 2025 - Present

Regional Communications, Media and Public Relations Officer

- Drafted and placed press releases and editorial content for regional and national outlets, responding to journalist enquiries and coordinating interviews, including securing published coverage in the Enfield Independent for a National Volunteers' Week feature.
- Planned and delivered regional public relations campaigns raising awareness of first aid, health emergencies and community volunteer recruitment across traditional and digital platforms.
- Gathered real-life case studies and produced multi-media materials for local broadcast, print and social channels, ensuring audience-tailored, human-interest storytelling.
- Cultivated relationships with local communities and coordinated with the national St John Ambulance press team to uphold brand consistency, editorial governance and safeguarding standards, including the responsible handling of attributed quotations and content involving vulnerable stakeholders.

Citizens UK

Jan 2026 - Apr 2026

Civil Society Organising Intern

- Advised on and advanced an integrated portfolio of policy priorities spanning the Living Wage, Living Hours, temporary accommodation, ESOL provision, air quality and youth safety across the East London boroughs, coordinating multi-stakeholder engagement among faith institutions, schools, universities, trade unions, councils and grassroots networks.
- Used AI tools to draft and restructure running orders and speech timings for 10+ campaign events spanning nationwide asks and borough-level actions, and to convert 10+ pieces of existing policy and campaign material into accessible public-facing formats such as posters and adverts, cutting materials production time by approximately 25 per cent while retaining manual review for audience fit.
- Designed and delivered end-to-end campaign communications for the V&A Living Wage initiative, scripting, filming and editing student testimony content and supporting the formal accountability submission to the Mayor of London at Tower Hamlets Town Hall.
- Managed turnout strategy, delegate tracking and operational delivery for the TELCO Delegates Assembly, National Delegates Assembly and Issues Workshop (chairing the Safety panel), deploying CRM-style tracking systems to monitor engagement metrics and reinforce institutional accountability across member organisations.

Self-Employed (Freelance, by Contract)

Jan 2019 - Jul 2023

OSINT Analyst

- Conducted social media investigations on behalf of a range of client organisations, including local government bodies and academic institutions, producing intelligence products to inform organisational decision-making.

- Developed expertise in open-source research methodologies, refining information-gathering and media analysis techniques across a sustained period of independent practice.
- Acquired foundational knowledge in cybersecurity disciplines, including penetration testing and operational security, broadening the analytical and technical scope of investigative work undertaken.

University of San Jose-Recoletos

Jan 2016 - Mar 2020

Social Media Manager

- Developed and executed integrated content strategies across multiple student organisations, ensuring consistency with institutional brand guidelines and editorial standards.
- Partnered with internal stakeholders, including the Scouts, Civilian Army and Debate Team, to promote events and drive measurable audience engagement.

Camino; Ibérica; The Lockdown Room and The Barre

Sep 2023 - Sep 2025

Chef de Partie

- Led section operations across high-volume venues, overseeing preparation workflows, service execution and shift handovers while directing demi and commis chef teams.
- Sustained quality and throughput during peak trading by prioritising workload, maintaining cross-section communication and resolving operational issues in real time.
- Administered stock management and supplier coordination to ensure uninterrupted ingredient and equipment availability.

Five Guys Enterprises

Mar 2023 - Sep 2023

Supervisor

- Promoted to a supervisory remit following completion of a structured operational and compliance certification programme.
- Oversaw front-line team performance during live service, ensuring brand-standard delivery and adherence to health and safety protocols.
- Produced two-week forward rota plans to optimise staffing levels against company performance targets and service KPIs.

Five Guys Enterprises

Jun 2022 - Mar 2023

Crew Member

- Completed comprehensive e-learning on health and safety codes and employee rights, applying them on shift in front-line service.
- Built a thorough working knowledge of the company's operating standards and wider hospitality industry practice.
- Adapted quickly to local workplace culture in the UK hospitality sector, building strong working relationships across the team ahead of promotion to Supervisor.

Taza Mia & Rapidé

Jan 2016 - Mar 2022

Business Operations Assistant

- Administered payroll processing and annual leave scheduling via Microsoft Excel, ensuring full compliance with HR legislation and employment standards in Cebu.
- Monitored staff performance metrics and supported data-informed operational decision-making across daily administrative functions.

VOLUNTEERING AND COMMUNITY ENGAGEMENT

Volunteer, St Luke's Community Centre, Islington

Sep 2025 - Present

Provided front-of-house and administrative support within a high-footfall community hub, signposting service users to relevant programmes and external referral pathways. Supported the planning and operational delivery of large-scale community events, including seasonal festivals and stall management. Facilitated daily community programming, including the over-55s Lunch Club, in line with safeguarding standards.

PASS Mentor, Queen Mary University of London

Sep 2022 - Sep 2023

Facilitated weekly peer-assisted learning sessions, building academic capability and examination readiness among first-year undergraduates. Cultivated an inclusive, collaborative learning environment encouraging independent enquiry and structured problem-solving. Modelled time management and exam strategies while directing students to relevant university resources.

EDUCATION

BA (Hons) Politics, Second Class Honours (Upper Division) Queen Mary University of London — London, UK | Sep 2023 - Jun 2026

Dissertation: Disinformation, Political Predispositions, and Memory Politics: Explaining Voter Perceptions in the 2022 Philippine Presidential Election. Used AI tools to triage and summarise research literature across all chapters and to stress-test the dissertation's original convergence model framework against counter-arguments, accelerating the early research and ideas stage by approximately 40 per cent while maintaining manual verification throughout.

International Foundation Certificate, Economics & Finance Queen Mary University of London — London, UK | Sep 2022 - Jun 2023

High School Diploma, Accounting and Business & Management Ateneo de Cebu — Cebu, Philippines | Jul 2020 - Mar 2022

High School Diploma University of San Jose-Recoletos — Cebu, Philippines | Jul 2016 - Mar 2020
